

SOLANA TURBIN3 Capstone Assignment 3

Name: Aditya

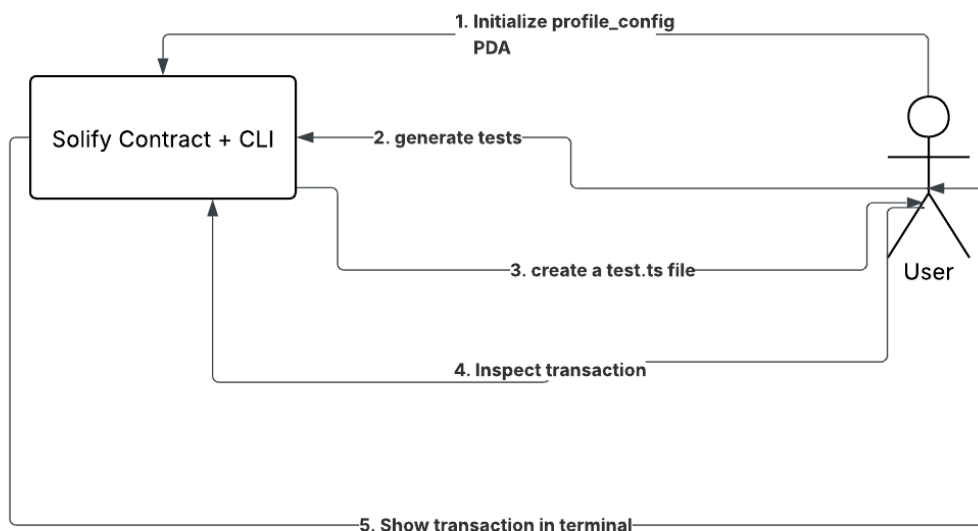

Turbin3 Public Key: 7qpCbG1WfLWsh4FhfoD5i5RbcVnFXuRbruG6ExhuRhe9

GitHub Profile: adisehrawat

Solidify POC Requirements

- Solify shall allow a user to initialize on-chain profile_config using command
- Solify shall allow a user to generate tests for their solana programs
- Solify shall allow a user to inspect transaction in terminal using command
- Solify shall allow a user to change rpc endpoint using command
- Solify shall allow a user to see his/her profile config

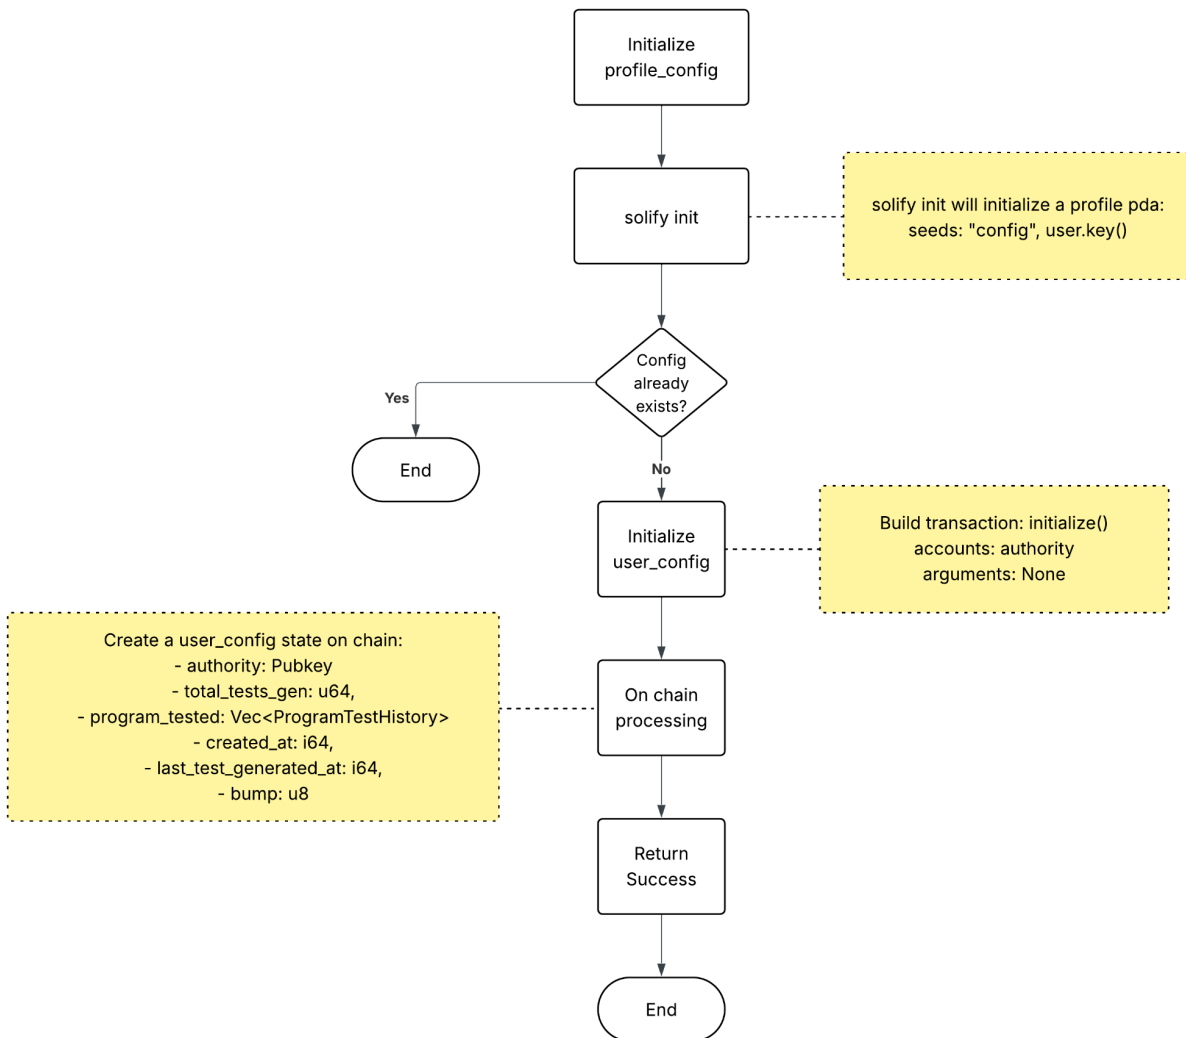

Overview

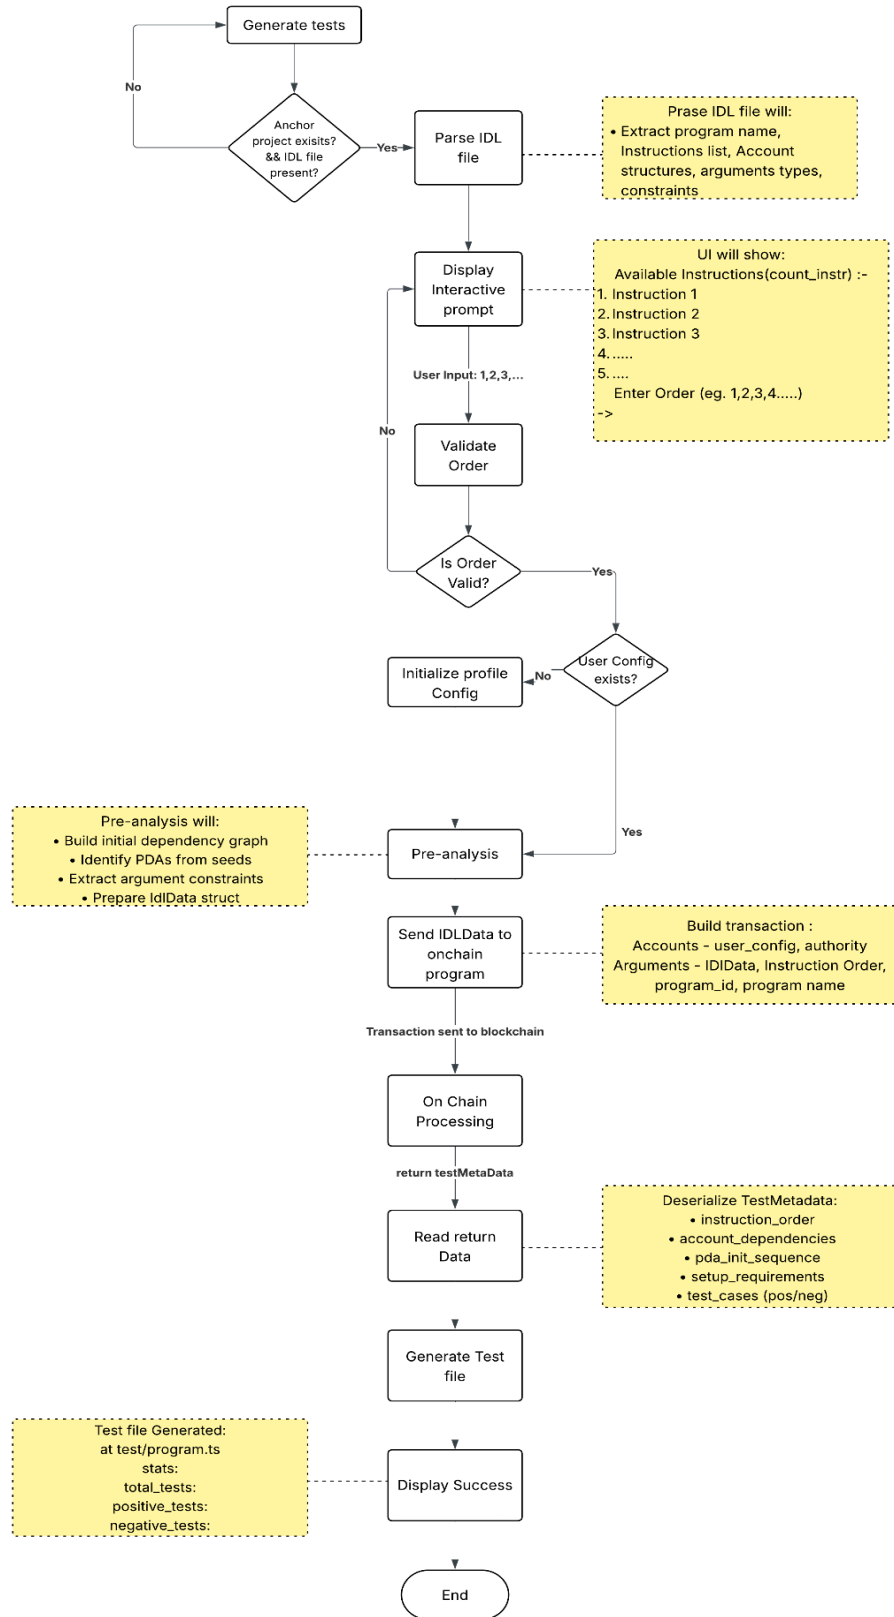

1. Initialize profile_config PDA
 - On-chain data account for user config will be created
 - All data/history of generating-tests will be stored here
2. Generate tests
 - Solify parser will parse the IDL and will give that parsed data to contract for generating metadata for tests
 - Output from instruction will be used by CLI to generate test file

3. Create a test ts file
 - Solify will create a test file in test folder
 - Then user can run anchor test to run tests
4. Inspect transaction
 - User will provide transaction id to solidify with command of solify inspect <transactionID>
5. Show transaction in terminal
 - Solify will parse the transaction and show transaction details in the terminal using TUI.
